STUDY GUIDE FOR RESIDENTIAL DESIGNER EXAMINATION

INTRODUCTION

Under the provisions of the Nevada State Board of Architecture, Interior Design and Residential Design's *Rules and Regulations*, Chapter 623, to qualify as a Residential Designer, an applicant must pass a written examination covering:

- Structural Technology
- Materials and Methods of Construction
- Building Systems & Life Safety
- Graphic Design

The applicant's knowledge in each of these subject areas will be assessed by separate tests. This study guide is designed to help the applicant prepare for the written tests on the first three subject areas listed above.

Each of the above tests consists of 60 multiple-choice questions. Each question is weighted equally. Regardless of the question's level of difficulty, it is worth one point. The applicant will have three hours to complete each test and must score at least 70% to pass. To pass the examination, the applicant must pass each individual test.

The *International Residential Code* and the *International Building Code* (2006), and a silent, nonprinting, nonprogrammable calculator may be used while taking the Structural Technology, Materials and Methods of Construction, and Building System & Life Safety exams.

The following pages contain information specific to each of the tests, i.e., overviews, subjects covered and suggested reading lists.

Structural Technology Content Outline

Exam purpose: Designed to determine applicant's ability to apply basic structural principles to problems encountered in the design and construction of single and multiple-family dwelling structures (composed of not more than 4 dwellings units in each structure) not exceeding two stories in height.

Exam content: The candidate will be able to define, interpret, and apply concepts regarding load, moments, stress, selection modules, and shear modulus of elasticity in accordance with the limitations and standards imposed by the ICC. Knowledge of general construction and design terminology is required.

		Approximate Percentage
I.	Sitework* **	10%
A.	Excavation and Grading	
B.	Soils	
C.	Compaction	
D.	Cut and Fill	
E.	Retaining Wall	
II.	Concrete*	30%
A.	Accessories	
B.	Reinforcing	
C.	Post Tensioning	
D.	Joints	
E.	Structures	
F.	Curing	
III.	Masonry*	13%
A.	Concrete Masonry Units (CMUs)	
B.	Masonry Reinforcing	
C.	Accessories	
D.	Masonry Ties	
E.	Brick	
F.	Fireplaces and Chimneys	
IV.	Wood*	44%
A.	Framed Wood Floors	
B.	Framed Roof Rafters	
C.	Framed Stud Walls	
D.	Framed Ceiling Joists	
E.	Sheathing	
F.	General Knowledge	
G.	Manufactured Trusses	
H.	Decks/Balconies	
I.	Wood Accessories	
J.	Engineered Lumber	
K.	Metal Web Wood Joists	
L.	Pre-Fabricated Shear Walls	
V.	Steel	3%
A.	Structural Steel	
B.	Light-Gauge Steel Framing

Methods and Materials of Construction Content Outline

Exam purpose: Designed to determine applicant's general knowledge of residential building methods and the ability to evaluate and select materials for typical construction products. The evaluation will take into consideration such factors as economy, ease of erection, and minimum construction standards as imposed by the ICC.

Exam content: Types of materials include masonry, finishes, concrete, doors/windows, wood and earthwork. In addition to the knowledge of Code, methods and materials, the applicant will be required to estimate labor and material costs to various applications.

Building Systems and Life Safety Content Outline

Exam purpose: Designed to determine applicant's understanding and ability to apply code requirements, principles of design, and life safety related to residential design.

Exam content: Cover general systems terminology, applications, principles and knowledge of applicable codes.
